

GLASURIT INFOLINE

GLASURIT SYNERGY

A vital component in your bodyshop's efficiency and profitability.

Glasurit Synergy is an advanced bodyshop support programme designed to provide key services to bodyshops, freeing up time, significantly improving process and colour efficiency, giving technicians time to paint more cars!

As a member of Glasurit Synergy, your bodyshop can benefit from a programme tailored to provide the colour and technical support, process optimisation and communications you need to

continually improve efficiency and profitability.

Profitable bodyshops must remain up to date with the very latest colour and technical information. Equipment must be maintained to operate efficiently, while staff must be up to date with the latest processes and techniques.

Glasurit Synergy brings all these aspects of your business together in one comprehensive and highly cost-effective package.

There is a comprehensive brochure and information pack available detailing the Synergy programme, please contact Jessica Morris on Jessica.morris@basf.com and she will provide you with all the information you need to help secure a successful future for your bodyshop.
